Albertus Freddi

The Automation Architect

I build the systems that do your repetitive work. AI agents, scrapers, bots, dashboards, websites and apps that keep running long after I hand them over.

WHAT I BUILD

AI Agents & Automation	Systems that read, decide and act while you sleep.
Web, Apps & Code	Sites, mobile apps, and the code behind them.
Data, Research & Strategy	Raw numbers turned into a decision you can defend.
Content & Copywriting	Words that rank, convert, and still sound like you.
Social Media & Design	Calendars, captions, carousels and the visuals to match.

HOW IT WORKS

1	**Send the brief**	One message. What is eating your time, and what good would look like. Rough is fine.
2	**Scope inside 24 hours**	You get the objective, the deliverables and a date in writing before anything is built.
3	**Build and hand over**	Working code, a walkthrough recording, and two weeks of fixes once it is yours.

CREDENTIALS

Experience	10+ years delivering to government buyers
Certified	CAP, App Security Practitioner (2025)
Building	Bittybe, live in five languages
Based	Jakarta, Indonesia · GMT+7
